Well Paths

This directory includes the lines representing the well-path segment between the surface and bottom-hole location of a deviated or horizontal well. Well paths are simplified and may not accurately represent all points between the surface location and the terminus.

Only wells with known or surveyed departures from vertical are included in this data set. The surface locations of all wells are included in the "WellSurface" directory .

- "wellpaths.zip" includes line segments in NAD 83 longitude and latitude.

- "wellpaths_prj.zip" includes line segments in NAD 83 Montana State Plane Coordinates (FIPS 2500)

Table attributes include:

API_WellNo	The API well number assigned to the well
Well_Nm	The name of the well
WellSub	The unique internal name of the individual well segment or lateral
Formation	The proposed or final formation that well lateral targets.
